- **Programing Languages:** PHP | JavaScript | TypeScript | Node.js | SQL | HTML | CSS | Sass | Python | C# | C++
- **Frameworks & Technologies:** Laravel | React.js | Next.js | Vue.js | Yii2 | Strapi | Jquery | Bootstrap | MySQL | PostgreSQL | NoSQL | AWS | Git | Docker | Livewire | Laravel Forge | Stripe | Tailwind CSS
- **Technical Skills:** Design Patterns | OOP | CI/CD | Database Design | Linux | Agile Methodology | Microservices | SOLID | Jira | ClickUp
- **Languages:** Arabic | English

Experience

Full-stack Developer L-One Systems *Damascus, Syria* **06/2024 - Current**

- Develop and maintain web systems, and write efficient, clean code with an eye toward scalability and maintainability.
- Communicate with clients to understand their needs, implement technology solutions that meet them, and deliver high-quality products that exceed their expectations, using the most modern technologies like **Laravel, React.js, Node.js, MySQL, Docker, and Git**.

Full-stack Developer Freelance **01/2022 - Current**

- Provide software solutions to business owners in their work. I communicate with the client, plan for the project, employ other freelancers as needed like designers or content writers, take the lead of the team, and implement all the programming work as a full-stack developer.
- I also work with software companies on project-based contracts, like my work with Andalus Software to build the social media Youtu.be.

Software Engineer Elev8xr *Remotely, Canada* **12/2022 - 12/2023**

- As a Software Engineer, my role was to quickly get hands-on with any project, regardless of the stack it was built on, and work then on maintenance and develop new features. For example, I took the lead and supervised the most critical project at the company, which makes thousands of dollars monthly for the company. Abba Medix is an e-commerce platform for selling pharmaceuticals in Canada, built with **Node.js, Strapi, Shopify, PostgreSQL, and hosted on AWS**. I implemented numerous improvements in both the frontend and the backend of this project, which contributed to the renewal of our contract with the client.
- In addition to working on current projects for fixes and improvements, I worked on several projects from scratch, whether as a backend, frontend, or full-stack developer, using the latest technologies like **Laravel, Vue.js, Node.js, PostgreSQL, AWS, and Git**.
- Furthermore, I contributed to system designs, planning, and client discussions to determine project requirements.

Frontend Developer Codesmos *Remotely, Syria* **12/2021 - 03/2023**

- Develop responsive websites. Editing and maintenance of previous websites. Contribute to ideas for UI/UX designs.
- Translate UI/UX designs into simple, readable, and efficient code using **HTML, CSS, Sass, Bootstrap, JavaScript, and Jquery**.

Full-stack Developer Flex Solutions *Damascus, Syria* **11/2021 - 12/2022**

- Develop responsive apps, systems, websites, and dashboards. Editing and maintenance of previous applications. Building RESTful APIs.
- Participate with the work team in planning and designing projects and express useful ideas.
- My primary role was a backend developer but I had no trouble switching over to full-stack tasks when needed. I used a wide range of technologies and tools including **Yii2, Laravel, Sass, Bootstrap, JavaScript, jQuery, PHP, MySQL, HTML, CSS, and Git**.

Education

Bachelor of Applied Science Damascus University *Damascus, Syria* **10/2016 - 10/2021**

- Major in Computer and Information Technology

Projects

- **Al Wasset:** Designed and developed a web app for freelancing using Laravel, Livewire, Alpine.js, and MySQL. **(Personal Project)**
- **Offers Dashboard:** Dashboard for managing a store's mobile app with RESTful API support. Built with Laravel. **(Flex Solutions)**
- **YouBeeU:** I worked with a team of at least 10 people in various disciplines to build this social media platform. My main task was to build the APIs for everything related to feeds using Laravel, MySQL, Git, and Postman. **(Freelance for Andalus Software in Singapore)**
- **Ancestry:** Developed this web app for mobiles and tablets for an art event in Canada. Its purpose was to allow users to view paintings and scan them to convert them into 3D objects. I used Vue.js for the development and deployed it to AWS. **(Elev8xr)**
- **Money Management System:** A web app to record financial transactions and generate chart reports (Yii2, native front) **(Flex Solutions)**
- **Homely Design:** Website and dashboard for company offers online landscape design services. Built with Laravel. **(Freelance for Canada)**
